

CONTENTS

<i>Preface</i>	ix
<i>Acknowledgments</i>	xiii
<i>Introduction</i>	xv
1. Tsunamis in the Global Ocean	1
1.1 Tsunamis and megatsunamis	1
1.2 Tsunami record and impact	4
1.3 Tsunami sources and generation mechanisms	5
1.4 Tsunami physical properties: a few elements	8
1.5 Tsunami quantification	9
1.6 The December 26, 2004 devastating tsunami in the Indian Ocean	15
1.7 The 2011 devastating tsunami in Japan	20
1.8 Tsunami early warning systems	28
1.9 Lessons learned from near-field early warnings: the Japanese experience	32
2. Historical and Geological Evidence of Tsunamis in Europe and the Mediterranean	39
2.1 Introduction	39
2.2 Historical sources	39
2.3 Geological and archeological signatures	60
2.4 Instrumental records	76
3. Impact of Tsunamis	77
3.1 Introduction	77
3.2 Effects of some important tsunamis	78
3.3 Impact statistics from a new tsunami catalog	93
4. Tsunamigenic Sources and Generation Mechanisms	101
4.1 Introduction	101
4.2 Tsunami sources and generation mechanisms	102
4.3 Source discrimination	110
4.4 Other tsunami sources	117

5. What Do We Learn for the Source Characterization from Numerical Modeling?	121
5.1 Introduction	121
5.2 Characterization of tsunami sources from numerical modeling inputs	122
5.3 Some conclusions	136
6. Hazard, Vulnerability, and Risk Assessment	137
6.1 Introduction	137
6.2 Glossary and terminology	138
6.3 Tsunami hazard assessment in the EM region	142
6.4 Tsunami vulnerability assessment in the EM region: qualitative and quantitative approaches	164
6.5 Tsunami risk assessment in the EM region	176
7. Tsunami Early Warning Systems and Risk Mitigation	179
7.1 Introduction	179
7.2 Early efforts	180
7.3 NEAMTWS: associated national centers – NEAMTIC	182
7.4 The JRC Tsunami Programme	197
7.5 Other early warning systems and operational tools	200
7.6 Local warning systems for near-field tsunamis	202
7.7 Tsunami early warning and risk mitigation: some critical issues	215
7.8 Other tsunami risk mitigation issues	225
Appendix	227
References	229
Subject Index	259
